

A Healthy Night's Sleep.

For additional safekeeping and peace of mind. Manufacturer has taken the added measure to ensure a healthy standard by treating our wool duvet with Sanitized®, a treatment used to assist in the control of bacteria, mould and mildew.

Unsurpassed Comfort.

Wool creates millions of air pockets to capture warmth and is able to absorb up to 30% of its own weight in moisture, making your bedding much more comfortable to sleep in.

Superior Insulation: Keeps body heat in and cold air out.

Resilient Natural Fibres: Wool is widely recognised as the least flammable fabric in common use.

Healthy: Wool is naturally non-allergenic and biodegradable. Wool requires no factory or chemicals to produce it and is a self-replenishing natural product.

Lasts a Lifetime: Wool's durability is unsurpassed by other natural fibres and, if properly cared for, will last a lifetime. For maintaining its life, we recommend covering your duvet with a breathable cotton cover.

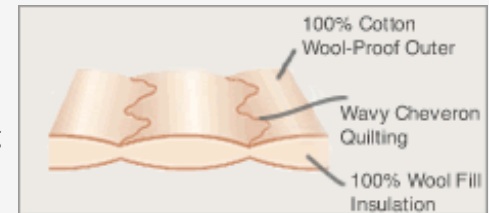

Warmth Without Weight.

The warmth of a duvet is measured in "TOG", the unit of thermal resistance universally accepted as the industry standard. The TOG value of a duvet is determined by the filling, cover fabric and stitch pattern. Using TOG values, we have been able to identify the ideal warmth required to maximise your sleeping comfort.

Quilting Pattern.

These duvets have been constructed using a Wavy Chevron Quilting Pattern, a unique design which firmly holds the wool fill insulation in place preventing movement during the night. Other quilting patterns, such as the diamond shape, result in unnecessary heat loss through excessive stitching. The Wavy Chevron has fewer needle holes for better heat retention.

Since heat collects above your body, less wool shift and fewer holes through which air can escape means better insulation where you need it the most.

Products From New Zealand Ltd look forward to offering you the ultimate nights comfort with these superb duvets.

Washing and Care Instructions.

-Dry Clean Only.

To retain its freshness, the duvet should be aired and shaken regularly. Spot clean with damp cloth and dry immediately.

Wool Duvet Quality.

Our duvets are generously filled with a specially developed blend of high quality wool.

100% Cotton Shell.

We have specifically developed a lightweight, finely woven cotton casing. By combining the latest airjet weaving technologies from Pakistan with the age old tradition of naturally grown cotton, Bowron has unveiled a perfect companion for our wool fill. The Threadcount of 170 and an English Cotton Count of 30x30, combine to prevent wool migration whilst maximising comfort with its soft, luxurious finish.
